TSUBAKI

www.rolman.com

The Tsubaki Group is the world's leading manufacturer of components and units that are essential for power transmission and conveyance, as well as systems consisting of combinations of these items. The Group primarily conducts four businesses—Chain Operations, which it has conducted since its founding in 1917, and Power Transmission Units and Components Operations, Automotive Parts Operations, and Materials Handling Systems Operations, which are born out of its chain technologies.

Our core strengths include our development capabilities; the customizability of our products, which can be arranged to meet the needs of specific customers; and the Group's production technologies, which have been fine-tuned to feature unrivalled levels of efficiency and quality. Leveraging these strengths, we have created countless products that have come to boast leading market shares.

Customers are increasingly concerned with total life cycle costs. Therefore demand is stronger than ever for enhanced quality and technology, particularly with respect to chain strength, durability and drive performance. To this end we are well placed; developing & releasing products that have the highest quality, added value, wear elongation and durability.
